The Hands Off Mother Earth (HOME) Campaign

200 civil society organizations, popular movements and individuals signed the HOME Manifesto to denounce geoengineering and demand an immediate stop to all open-air experiments.

Geoengineering Monitor

Geoengineering Monitor is a joint project of Biofuelwatch and ETC Group, with support from Heinrich Boell Foundation.

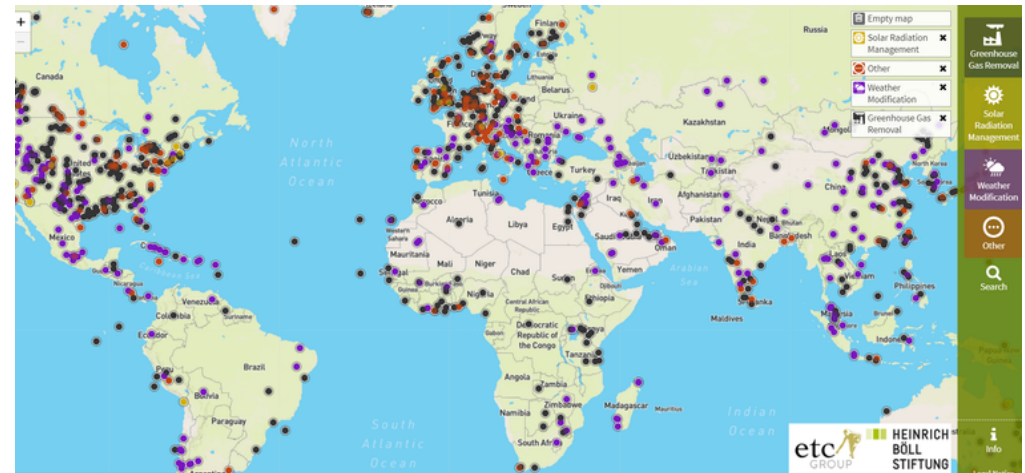

It aims to be a timely source for information and critical perspectives on climate engineering.

Our goal is to serve as a resource for people around the world who are opposing climate geoengineering and fighting to address the root causes of climate change instead.

Geoengineering Map

An interactive map that attempts to shed light on the worldwide state of geoengineering by showing the scope of research and experimentation.

The map is prepared by ETC Group and the Heinrich Boell Foundation.

The Big Bad Fix

In this report, ETC Group, BiofuelWatch and Heinrich Boell Foundation present a comprehensive argument against geoengineering.

Available in English, Spanish and French.

Big Bad Fix (English):

La grande fraude climatique (Français):

<https://www.etcgroup.org/fr/content/la-grande-fraude-climatique>

A technofix for the climate?

In a 3-part series of short videos, the Heinrich Böll Foundation presents various geoengineering interventions that some climate scientists are proposing to halt global warming.

These schemes to manipulate our ecosystems and global natural processes come with great risks and uncertainties, as well as with foreseeable adverse impacts on marine ecosystems and human communities.
