

Riding the geostorm: Is it possible to govern geoengineering?

October 10, 2017

The prospect of controlling global temperatures raises serious questions of power and justice: Who gets to control the Earth's thermostat and adjust the climate for their own interests? Who will make the decision to deploy if such drastic measures are considered technically feasible, and whose interests will be left out? This briefing from civil society on Geoengineering Governance was produced by ETC Group and the Heinrich Böll Foundation.
